Flow-meter boxes mod.60 & 62 for oxygen analyzers

- Necessary in order to send the air flow of reference to the zirconia oxide probes.
- Useful in order to send two gas with known oxygen concentration (one is air) in order to operate the calibration or the control of good operation of all the apparatus.
- Models 60 and 62 come lodged in containers constructed in sturdy sheet fire painted , ponds, and are express designed with flow-meters for the Fer Strumenti oxygen analyzers both for high and low temperature.
- Model 60 needs the air from the air net instruments. A reducer of pressure with filter and condense discharge supply the air to the flow-meters.
- Model 62 equipped with electrical membrane pump , installed in the cassette in place of the pressure reducer, supplies the air to the flow-meters

Protection tubes for oxygen analyzers

- Available several combinations of protection traps being able to arrange flanges and tubes..
- Materials available for the tubes are Steel, inconel, allumel and ZAC.
- Flanges ANSI, RF and DIN from 3 to 6 inches in iron carbon or INOX
- Custom flanges perforations available
